

“H” Series Jet Cleaners

Application

Adjustable size “H” Series Jet Cleaners are used to clean, scrape, size or measure LP or natural gas orifices. Provides positive oversize protection with absolute control of the orifice size. Assures burr-free and smooth passageways. All aluminum and steel construction – no plastic. Number drill size marking is standard; decimal marking available on request at no additional charge (add “D” to item number).

For easy setting, tool shank is marked with drill sizes.

To adjust, rotate handle to unlock, slide to desired diameter mark, then rotate to lock position.

One tool replaces 13-pc drill kit - never lost or misplaced sizes.

Service Man's Little Helper

Application

A very simple and useful tool - made of surgical rubber bulb, stainless steel clamp, and 20" aluminum tubing. It comes assembled and ready to use - to clean pilots, clean venturis, hold a match, or vacuum up oil and deposits from hard to reach cups. The Service Man's Little Helper solves most service call problems that concern pilot outages.

Care should be taken when using on single burner units, such as water heaters. The fire can be blown off the burner or pilot - this can be a dangerous situation.
